## **Press Release:**

For Immediate Release

### **DSCI's C4 Division (XPRT Solutions, Inc.) is Awarded U. S. Navy Wireless Networks Architecture Contract**

(Eatontown, N.J.) June 7, 2007 – D&S Consultants, Inc. (DSCI) announced today that XPRT Solutions, Inc. – *A DSCI Company* was awarded a U.S. Navy contract to develop dynamic wireless networks architecture to support quality of service requirements. The effort will include essential research for the development of reconfigurable mobile ad hoc networks that are scalable and capable of providing end-to-end quality of service through optimum resource management.

While providing obvious benefit for dynamic military networks, the technology can easily be extended to the commercial market to alleviate issues like performance, scalability, security, and business efficiency associated with core-centric infrastructures. “Extending tactical applications into the commercial market, XPRT continues to serve both the military and the business community,” said Dr. George Elmasry, General Manager, XPRT Solutions, Inc - *A DSCI Company*.

“Innovation developing dual use - military and commercial solutions is a core tenet of our strategy. DSCI’s unique expertise regarding MANET coupled with this strategy is central to our continued success in the C4 space,” said DSCI’s Chairman of the Board, President, and Chief Executive Officer, Steven A. De Chiaro.
